Advanced technology

In-house technology for waste collection and street cleansing

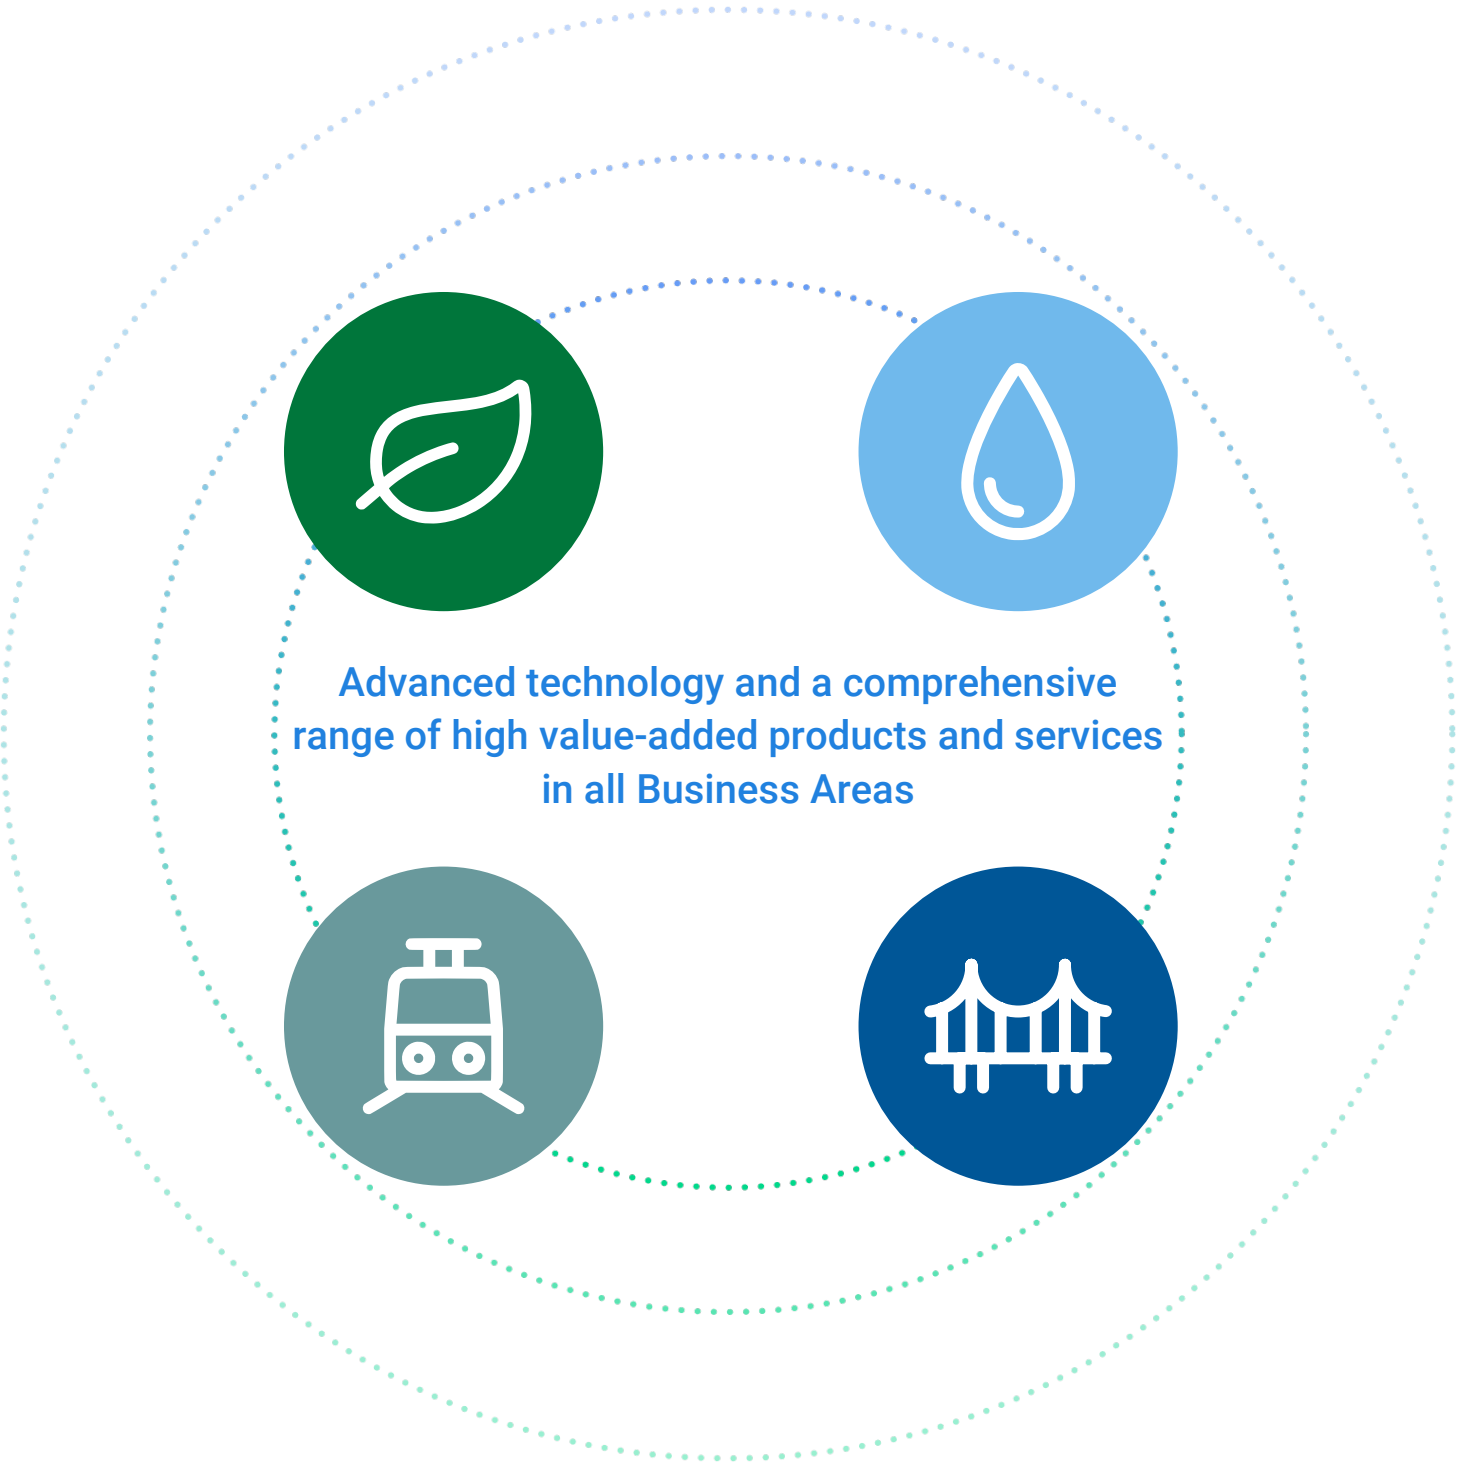

Leadership in recycling and waste-to-energy systems

Experts in providing solutions at all stages of the water management cycle for all users: residential, agricultural and industrial, meeting needs of institutions and public and private organisations

Specialists in technically complex bridges and harbours

Innovative processed for high-speed lines, underground railways and tunnels

Specialist in turnkey projects in the industrial sector

Corporate Governance Structure

Composition of the Board

11 members

- 8 Proprietary Directors
- 2 Independent Directors
- 1 Executive Director

Audit and Remuneration Board Commissions

- Chaired by independent members

Main features

FCC Group

Environment

Providing services to cities **since 1911**

Top 7 in the world

Serving over **78 million** citizens

Over **860 waste treatment, recycling and disposal centres**

ISO 50001 certificated Comprehensive Energy Management

Managing **26,9 million tonnes of waste** per year

Operating in over **5.650 municipalities**

4,217 sustainable vehicles (CNG, electric, hybrid and bi-power)

Over **54,000 employees**

Inclusion of underprivileged groups in the workplace

Most technologically advanced vehicle fleet in the world, nearly **23,000 units**

Smart Services

Among the top 7 companies in the world, we have been providing services for **over 110 years**

We offer a **complete range of environmental services**, from Municipal Waste Collection to the most advanced Waste Treatment and Recycling systems

With internal R&D&I resources that allow us to offer the most innovative solutions to our customers. **21 projects registered** to date in the internal **R&D&I certification system UNE 166002**

Committed to cities in offering **socially, economically and environmentally sustainable solutions**

We help cities to be more **effective and resource-efficient**, more **sustainable and more socially responsible**

Global leader

Incineration with production of Renewable Energy

13 Waste-to-Energy projects

410 MWe power output

3.8 million tonnes annual capacity

Zistersdorf (Austria) / 154,000 tpa

Allington (United Kingdom) / 550,000 tpa

Massive-scale Mechanical-Biological Treatment

Ecopark of Barcelona

One of the largest facilities in the world

- Operating since 2003
- Recycling, anaerobic digestion and composting facilities
- Treatment capacity: 264,000 tpa
- Population served: 542,000 inhabitants

Biomethanization Plant Las Dehesas

(Technological Park Valdemingomez/ Madrid)

The world largest anaerobic digestion facility

- Operating since 2009
- Anaerobic digestion (5 digestors x 3,600 m³)
- Treatment capacity: 220,000 tpa
(100% Selective Organic Fraction as the input)
- Population served: 3 million inhabitants

Global leader

Municipal Services since 1911

FCC Group

Environment

Renewable energy from sanitary landfills

FCC recovers biogas from many landfills for use as renewable fuel.

Programme for developing more than 100 MW of wind and photovoltaic energy in United Kingdom landfills.

Solar park in Winterton, United Kindom

Committed to innovation

E-mobility: the future of Urban Services is Today

FCC Medio Ambiente developed the first industrial **e-mobility chassis-platform for Urban Services**, an actual **breakthrough** to achieve smarter and more sustainable cities:

Versatile: adjustable to every function in urban services and every power requirement.

Efficient: Range and performance equal to any combustion vehicle, with a 50% lower energy consumption.

Zero Emission Vehicle – Great Carbon footprint reduction.

Circular: 100% recycling components and extended lifespan.

New e-mobility Platform for Urban Services Vehicles

Awarded the **Smart City Awards 2019** in the 'Innovative Idea' category.

Awarded the **2019/2020 European Business Awards for the Environment** (EBAE Awards) in the products & services category.

Awarded the **Ecological Industrial Vehicle of the Year 2021** in the mixed category, at the National Transport Awards.

FCC Group

Environment

Committed to innovation

FCC Group

Environment

H2TRUCK Project

Research and Development of a New Heavy-Duty Vehicle for Urban Service Applications with Battery-Hydrogen Fuel Cell Hybrid Technology.

Heavy-duty chassis-platform with electric 100% drive.

Powered by a hydrogen cell and lithium-ion battery hybrid system that is completely environmentally friendly.

Can be applied in the future to any equipment or machine that provides urban services, regardless of the number and layout of axles or the bodywork installed

Successful world presentation at the Smart City Expo World Congress 2024 in Barcelona.

Winner of the Smart City Awards 2024 in the 'Energy and Urban Environment' category.

Recovery of critical raw materials from municipal solid waste (MSW)

MINETHIC's general objective is the research of new sources of non-conventional mining raw materials, both industrial and urban, for the Green Transition. New technologies will be researched that will enable the recovery and valorisation of critical raw materials generated in urban and industrial activity, thus reducing the consumption of natural resources

Recovery of slag from MSW incineration

ECO2D4.0 (ZL-2023/00884): Development of comprehensive solutions for the functional and environmental monitoring of road infrastructure. It aims to research new applications for waste management in cases where there are few recovery methods, such as ferrosite, incineration slag and foundry sands, although milling waste and black slag are also included.

RSU4HOM It aims to minimise the environmental impact of landfilling slag of incineration from two plants in Zubieta (Guipúzcoa, Spain). The intention is to recover this waste and use it as aggregate in the manufacture of construction materials (concrete, mortar and precast concrete).

Mitigation of environmental impact

LIFE ABATE (LIFE-2022-SAP-ENV 101113838): It seeks to improve the sustainability of mechanical biological waste treatment plants by demonstrating the benefits of an innovative technology for reducing emissions of non-methane volatile organic compounds (NMVOCs) and CO₂.

Leading a circular economy for plastic

LIFE ZEROLANDFILLING (LIFE2022/SAP/ENV/ES/101114213): proposes an innovative management model for treating non-recyclable municipal waste (non-recyclable plastics and bio-waste) by means of pyrolysis that currently ends up in landfill, generating value-added products such as green naphtha, charcoal and synthetic gas, presenting a sustainable and competitive zero-waste solution.

PROSPER (101157907 / HORIZON-JU-CBE-2023): proposes a solution for the classification and recycling of bio-based plastics through the reactivation of bioplastics present in the packaging market, using new AI classification systems in treatment plants and improving mechanical and chemical recycling systems.

LIFE PLASMIX (LIFE18 ENV/ES/000045): has demonstrated the technical and economic viability of the material recovery of mixed plastics from municipal solid waste, showing that the recycled material not only meets quality standards, but is also suitable for practical and sustainable applications, such as the manufacture of fruit boxes and street furniture (plant pots, slides, traffic cones, etc.).

Renewable fuels

ECLOSION (MIG-20211071): seeks to create new materials, technologies and processes for the generation, storage and transport of hydrogen and biomethane from urban waste, agro-food waste, wastewater and sewage sludge. FCC Medio Ambiente is researching the dark fermentation process using the organic fraction of MSW as a substrate.

LIFE LANDFILL BIOFUEL (LIFE18 ENV/ES/000256): has obtained hydrogen from biogas resulting from dark fermentation using organic fraction of MSW as a substrate. The project has powered light and heavy vehicles that have travelled more than 30,000 and almost 40,000 kilometres respectively with the biomethane produced from landfill biogas.

Creation of new by-products and biomaterials

BIOPROLIGNO (CPP2022-009647): seeks to demonstrate the effectiveness of three bioproducts obtained by the pyrolysis of lignocellulosic waste: wood vinegar as a substitute for herbicides in both gardening and infrastructure maintenance and as a stimulator in composting; biochar as a soil improver and compost additive; and biobitumen as a binder in asphalt mixes for the repair of bituminous pavements.

LUCRA (101112452 – HORIZON-JU-CBE-2022): will use organic waste from the food and horticultural sectors and wood residues from the EU as raw material for the large-scale production of high-yield chemical bioproducts through the electrochemical extraction of succinic acid using a circular economy biorefinery approach to reduce dependence on fossil resources, the cost of bio-succinic acid and 50% of GHG emissions compared to conventional succinic acid.

DEEP PURPLE proposes a synergistic and comprehensive treatment for the valorisation of three types of bio-waste: OFMSW, sludges from wastewater treatment plants (WWTP) and urban wastewater, by means of a multi-platform photobiorefinery based on phototrophic purple bacteria, producing five new bioproducts with commercial value in plastics, construction and fertilizers industries.

UNITED CIRCLES (101178798/ HORIZON-CL4-2024-TWIN-TRANSITION-01): the main objective is to accelerate transition towards a fully decarbonised future, where waste and water cycles are closed. The aim is to demonstrate the transformation of waste into new recycled products by promoting the urban-industrial symbiosis. It seeks to reduce waste generation through recovery and reuse in new industrial applications along the entire value chain through seven Circularity Hubs.

BIOMET seeks to develop and optimise a new generation of bioreactors for pre-treatment and biomethanisation of biogas (both landfill and digester) into biomethane. It will investigate the microbiology of conversion processes to eliminate contaminants from biogas in a more efficient and sustainable way, while also increasing knowledge of biogas and biomethane produced from organic waste.

Committed to Artificial Intelligence

Strret cleansing inspection vehicle with AI

Visual recognition using AI to detect waste left beside containers

Developed by the Information Technology department and the Madrid branch of FCC Medio Ambiente in collaboration with a company specialising in AI, Advisory Experts.

Data feed device through artificial vision, visual sensors and the development of algorithms based on AI and Machine Learning.

Reduction of the average intervention time by more than 50%, increasing efficiency

PLAUSU Project

AUtonomous **PL**atform for **U**rban **S**ervices (PLAUSU). Research and development of automation technologies focused on the operation in autonomous mode of an urban service platform for cleansing works.

100%-electric chassis-platform.

Dual wash down-sweeper vehicle.

Remote control, GPS positioning and perception by LiDAR.

Committed to inclusion

FCC Equal

FCC Equal is a **Special Employment Centre** whose aim is the **social and labour integration and training of people with disabilities**, as well as the improvement of their health and safety conditions.

It also seeks to provide them with skills, abilities and competencies for their professional development in the company.

Along last year:

- 219 job offers
- 1,423 candidates analysed
- 439 people integrated

Currently all activity with specialised organisations is channelled through the **Incorpora Foundation**.
