

La Oliva entrusts the management of its urban services to FCC Medio Ambiente

- *The award of the contract consolidates FCC Medio Ambiente's presence in Fuerteventura and reinforces its commitment to the island's sustainable development.*
- *The new contract introduces a fifth bin, an electrified fleet and AI-based technology to optimise the management of urban services.*

Madrid, 1st October 2026. La Oliva Town Council (Las Palmas) has awarded FCC Medio Ambiente the new contract for waste collection, street cleansing and beach cleaning in the municipality for the next ten years. The contract is worth €63 million and **consolidates the company's presence on the island of Fuerteventura, where it already provides services in most of the municipalities** and manages the Zurita Environmental Compound and the island's separate waste collection scheme.

The new contract involves a workforce of over 140 professionals and enhances the material resources, the mechanisation of operations and the sustainability of the services compared with the previous management.

Among the main improvements is the introduction of a modern fleet of vehicles and machinery, reflecting a **clear commitment to sustainability and electrification**. The service will feature electric street sweepers and high-pressure washers, auxiliary vehicles with a 'Zero Emissions' label, and systems designed to reduce water consumption and emissions. The proposal also provides for the **introduction of separate collection for organic waste** via a fifth fraction bin, with over 500 new units, and the launch of home composting initiatives to promote the circular economy.

Digitalisation is another of the proposal's cornerstones, with the introduction of a comprehensive management platform that will enable real-time monitoring of operations via GPS systems, RFID technology and artificial intelligence. These tools will facilitate route optimisation, incident detection and service monitoring, thereby improving operational efficiency and the ability to respond to the municipality's needs. In addition, **residents will have access to a phone app** and new communication channels for reporting and tracking incidents, requesting bulky waste collections and interacting directly with the service.

The collection service will handle around 18,700 tonnes of waste annually and will significantly strengthen the municipality's operational capacity. More than 1,400 bins for the general fraction waste will be installed, increasing the available bin capacity by over 30 per cent, and new

equipment and resources will be introduced to optimise collection frequencies and better adapt to the needs of the city's various urban and tourist centres.

Street cleansing, which covers more than 160,000 linear metres of streets, will be enhanced through 26 sectors of daily manual sweeping, supported by mechanised teams, ongoing maintenance services and night-time street washing, with particular attention paid to the tourist centres of Corralejo and El Cotillo.

The contract also includes the comprehensive cleaning of the municipality's beaches, including the urban beaches of Corralejo, the Grandes Playas in the Corralejo Dunes Natural Park and the beaches of El Cotillo, with permanent teams operating throughout the year and additional staff deployed specifically during the summer season.

With this new contract award, FCC Medio Ambiente reinforces its **commitment to the sustainable development of Fuerteventura and consolidates its position as a strategic partner to the island's municipalities** in the provision of essential urban services.

About FCC Medio Ambiente

FCC Medio Ambiente is the company that coordinates, in Spain, the activities provided by the environmental services group FCCenviro since 1911. The Group currently provides municipal services and waste management for more than 83.5 million people in 5,900 municipalities worldwide.
